EDUCATION

McMaster University

Hamilton, ON

Bachelor of Engineering, Software Engineering Co-op; GPA: 3.6/4.0

September 2023 – April 2027

Courses: Object Oriented Programming, Data Structures and Algorithms, Databases.

EXPERIENCE

Software Developer Intern

March 2025 - May 2025

Playbook International Media Corp.

Remote - Toronto, ON

- Automated spreadsheet data entry by building an ETL pipeline using Pandas and Numpy in Python.
- Developed a web scraper to automate the extraction of 200+ dynamic spreadsheets using Selenium.
- Engineered a custom header-matching framework using an NLP model and interactive prompts to standardize inconsistent headers into 30 key phrases, achieving over 90% accuracy in mapping column names across sources.
- Deployed data into Amazon RDS (PostgreSQL) using SQLAlchemy, centralizing all 200+ spreadsheets into a managed relational database and eliminating manual CSV imports.

Backend Developer

September 2024 – April 2025

DBAC-Gym Companion App

Hamilton, ON

- Worked in an 8-person SCRUM team to develop a full-stack React Native app accommodating 10,000+ users.
- Developed and documented REST API endpoints for secure data exchange between the client and database.
- Dockerized backend APIs and deployed to Google Kubernetes Engine for scalable, containerized cloud hosting.
- Architected and implemented a scalable friend list system in Firestore, through efficient data modelling, optimized queries, and real-time synchronization, ensuring low latency and robust performance.

Swim Coach

September 2021 – August 2024

Jack of Sports

Toronto, ON

- Broke down complex swimming technique issues into simple, actionable steps using clear communication.
- Planned lessons and assessed swimmer progress over time, adjusting instruction based on feedback and results.

PROJECTS

Ontario Engineering Competition | PowerPoint, Word, MS Office

February 2024

- Achieved first place in a competition consisting of Junior Engineering teams across 17 Ontario Universities.
- Created and presented a PowerPoint slideshow to demonstrate our design's feasibility to a panel of engineers.
- Joined the organizing committee for 2025 and co-led the planning and presentation of this year's design prompt.
- Conceptualized, prototyped, designed, and built a glider with a launcher from craft materials in under 7 hours.

🔗 TrueDermis | Tensorflow, Amazon Web Services, Flask, Trello(Kanban), Google Colab

April 2025

- Led a team of six interdisciplinary students in the research and development of a full-stack healthcare web app.
- Facilitated weekly meetings to drive alignment on priorities and progress to ensure project deadlines were met.
- Architected a Flask backend to securely fetch the classification model from an AWS S3 bucket at startup using Boto3, ensuring versioned model management and reducing local storage dependencies.
- Trained skin-disease model on Keras, handling data prep and augmentation, achieving a 70% validation accuracy.

🔗 Git Tissues | Postman, GraphQL, Node.js, Express.js

February 2025

- Developed a full-stack web application using with Flask serving a REST API with React as the frontend.
- Built Node.js REST APIs with robust error handling and Postman-tested them for reliable, bug-free performance.
- Wrote GraphQL queries using Apollo Server to fetch data from GitHub's API, optimizing retrieval performance.
- Integrated OpenAI ChatGPT API to run prompts and retrieve AI responses, streamlining content workflows.

TECHNICAL SKILLS

Languages: SQL, Python, C/C++, Java, JavaScript, HTML/CSS, Bash, YAML

Frameworks: React, Node.js, Flask, Selenium, REST, Expo

Developer Tools: Git, Docker, Amazon Web Services, Google Cloud Platform, VS Code, Docker, Kubernetes

Libraries: Pandas, NumPy, Matplotlib, Tensorflow, Beautiful Soup

MS Office: Excel, PowerPoint, Word
