EDUCATION

McMaster University

Expected April 2028

Bachelor of Engineering, Software Engineering Co-op; GPA: 3.6/4.0

Hamilton, ON

- **Courses:** Object Oriented Programming, Data Structures & Algorithms, Databases.
- **Awards:** Engineering Award of Excellence, Dean's List

EXPERIENCE

Software Developer Intern

March 2026 – Present

Noble Solutions Enterprises Inc.

Hamilton, ON

- Building a full-stack CRM from scratch using Vite (frontend) and Supabase (backend), with Google Cloud Platform handling OAuth authentication and role-based access control.
- Designed and implemented an automated email system using Brevo's transactional API with custom subdomain logic to segment transactional, marketing, and personal communications.
- Translating complex brokerage workflows such as client onboarding, document management, and financial reporting into clean, maintainable production software following SDLC best practices.

Software Developer Intern

March 2025 – May 2025

Playbook International Media Corp.

Toronto, ON

- Built an ETL pipeline using Python (Pandas, NumPy) to automate data entry across 200+ spreadsheets, eliminating manual CSV imports and reducing operational overhead by 25%.
- Engineered a custom header-mapping framework using NLP and interactive prompts to standardize 30+ inconsistent column names across sources, achieving over 95% mapping accuracy.
- Migrated cleaned data into Amazon RDS (PostgreSQL) using SQLAlchemy, centralizing all datasets into a managed relational database for downstream analysis.

Backend Developer

September 2024 – April 2025

Google Developer Group McMaster

Hamilton, ON

- Collaborated in an 8-person SCRUM team to develop a full-stack React Native app supporting 10,000+ users.
- Developed and documented REST API endpoints for secure data exchange between client and database.
- Dockerized backend APIs and deployed to Google Kubernetes Engine for scalable, containerized cloud hosting.
- Architected a scalable friend list system in Firestore through efficient data modelling, optimized queries, and real-time synchronization, ensuring low latency and robust performance.

PROJECTS

GateKeeper | C, OpenSSL, SQL, Bash, YAML, GitHub Actions

December 2024

- Collaborated in a 4-person team to develop a local encrypted password manager with a CI/CD pipeline.
- Wrote a Bash testing script and YAML workflow using GitHub Actions to automate unit testing and upload results, ensuring defect-free releases.
- Designed SQL database tables and optimized queries to securely store and manage encrypted user credentials.
- Integrated OpenSSL to generate salts, AES-256 keys, and initialization vectors for secure encryption workflows.

TrueDermis | TensorFlow, AWS (S3, EC2), Flask, React

April 2025

- Led a team of six to build a full-stack healthcare web app with a React frontend calling Flask REST APIs.
- Architected the backend to securely fetch a classification model from AWS S3 using Boto3, ensuring versioned model management and reducing local storage dependencies.
- Trained a skin-disease classification model using TensorFlow, handling data prep and augmentation.

Ontario Engineering Competition — 1st Place Provincial | Design, Presentation

Feb 2024 – Feb 2025

- Won first place across 17 Ontario universities and advanced to the Canadian Engineering Competition.
- Designed, built, tested, and presented a functional glider prototype under a 7-hour deadline.

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL, HTML/CSS, Bash, YAML, XML

Frameworks: React, Next.js, Node.js, Flask, REST APIs, Selenium, Expo

Developer Tools: Git, Docker, Kubernetes, Google Cloud Platform, Amazon Web Services, GitHub Actions

Databases & Libraries: PostgreSQL, Firestore, Supabase, SQLAlchemy, Pandas, NumPy, TensorFlow
